

PBL (Project-Based Learning) Basics

You'll find reference to PBL throughout our listings of elective classes.

PBL is a natural result of applying knowledge gained from class content to a wider context.

PBL is a method in which students acquire a deeper knowledge and gain understanding of skills by studying a broad question over an extended period of time.

Students develop this deeper understanding while also practicing critical thinking, creativity, and communication.

Knowledge and skills are demonstrated by creating a project to share their findings.

You can find out more about our project requirements and how we support successful project creation [HERE](#).
